

Our in house Art Department, with the pre-press team prepares all badge litho's to customer specifications. Color fast heat resistant inks are used and all badge litho's are UV laminated on both sides. This gives our product a water proof and protected image that is folded into metal with a space age backing that becomes the mounting substrate assembly for different attachment findings*. *(jeweler quality pins - rare earth magnets - clips - and other special applications of attachment). And we are proud as manufacturers to say Made in the USA . . .

No charge for Pre-Press Art, Type & Setup a Value of up to \$500
